Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-15. (canceled)

A co-expression system comprising a first nucleic acid (new): Claim 16. sequence and a second nucleic acid sequence, wherein said first nucleic acid sequence encodes a periplasmic protein heterologous to a bacterial cell, and wherein said second nucleic acid sequence encodes a bacterial polypeptide that enhances the folding of said periplasmic protein in said bacterial cell.

A co-expression system according to claim 16, wherein said (new): Claim 17. bacterial polypeptide encoded by said second nucleic acid sequence is the Skp protein, a homologue thereof, the FkpA protein, or a homologue thereof.

A co-expression system according to claim 17, wherein said Claim 18. (new): periplasmic protein heterologous to said bacterial cell is an immunoglobulin or a fragment thereof.

A co-expression system according to claim 18, wherein said (new): Claim 19. bacterial polypeptide encoded by said second nucleic acid sequence is the Skp protein.

A co-expression system according to claim 18, wherein said (new): Claim 20. bacterial polypeptide encoded by said second nucleic acid sequence is the FkpA protein.

A co-expression system according to claim 19, wherein said (new): Claim 21. periplasmic protein heterologous to said bacterial cell is a Fab immunoglobulin fragment.

A co-expression system according to claim 19, wherein said (new): Claim 22. periplasmic protein heterologous to said bacterial cell is a scFv immunoglobulin fragment.
